ViewPort™ Vivarium

Information
where you want it,
when you need it.
Simple.

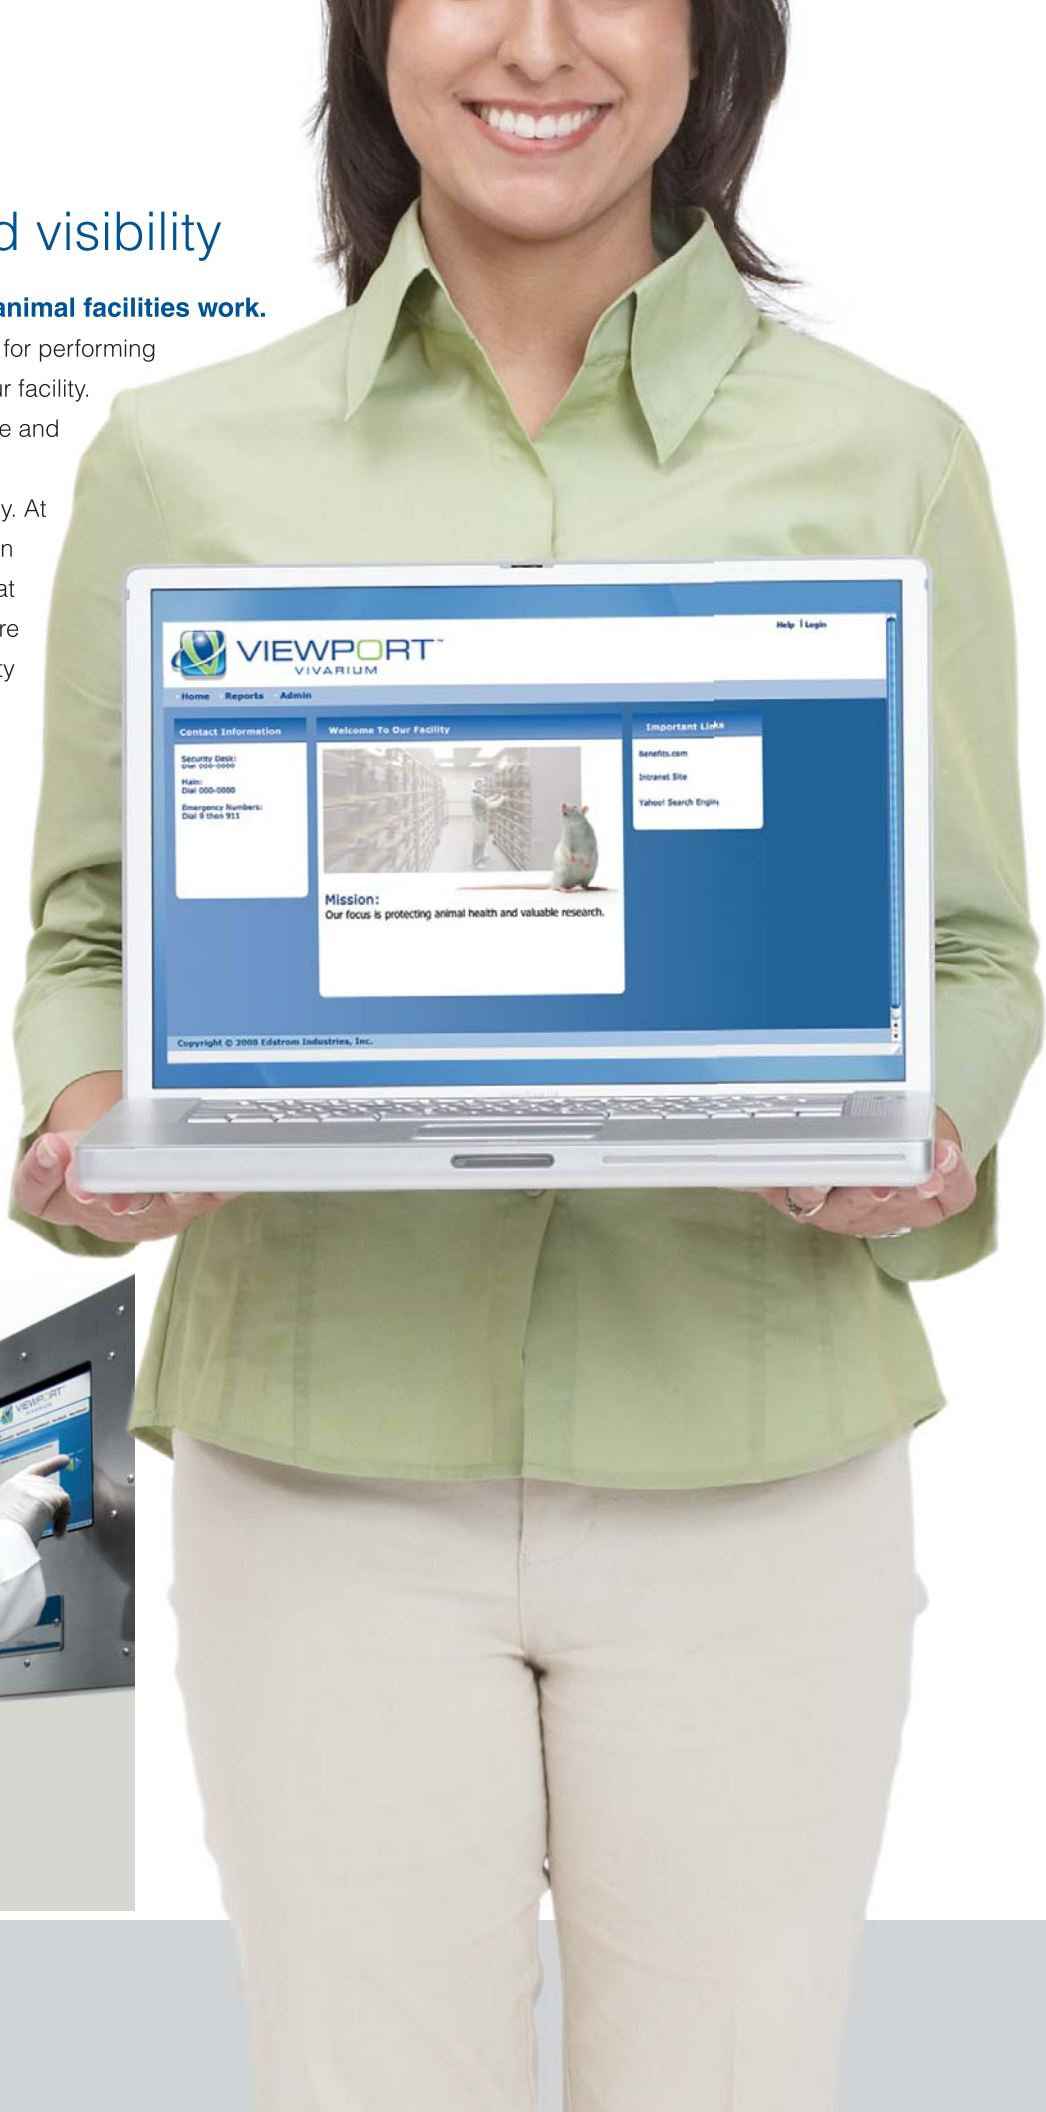

Accountability, communication and visibility

ViewPort™ Vivarium simplifies how animal facilities work.

Providing the best surroundings and tools for performing research is essential to the success of your facility.

ViewPort Vivarium brings managing people and process together towards the same goals: accountability, communication and visibility. At its heart are task management, observation management and messaging functions that improve communication among animal care staff, researchers, veterinarians, and facility management. The result is streamlined workflow, more data available for decision making, a reduction in paperwork, and a well managed facility. ViewPort Vivarium brings knowledge about animal care right to people's fingertips.

What can ViewPort™ Vivarium do for you and your facility?

ViewPort Vivarium is a web-based solution that provides information in real-time. The system is updated immediately when someone enters information. Visibility is enhanced through multiple points of access including touchscreens, personal computers, or your wireless tablets. This drives accountability, coordination, accuracy, and increased productivity in your operation. User-friendly computer touchscreens can be placed in the corridors, suites, or animal rooms to provide on-the-spot access to key vivarium data. Users can view and take action on the information pertinent to their roles. This is accomplished by the built in filtering intelligence, which shows users only what is relevant to them, based on their role and where they are in the facility.

Tasks

Tasks are room-based, showing people what they need to do each day and recording when the task is performed. Tasks are set up using task templates that can be defined for different species or different room types. Changing a rabbit room to a mouse room? Simply switch the template and all tasks will change instantly.

Observations

Observations allow people to record important data about animal health, equipment conditions, or other data you need tracked to a specific room.

Partner Link

ViewPort Vivarium has the capability to link to other suppliers' Web-based software and access the partners' software at the touchscreen via a partner link. For example, if your facility has Web-based animal health records software and would like to log in to see the animal health records in a particular room, you have the ability to do so at the touchscreen. Edstrom provides an integration kit to implement the Partner Link feature.

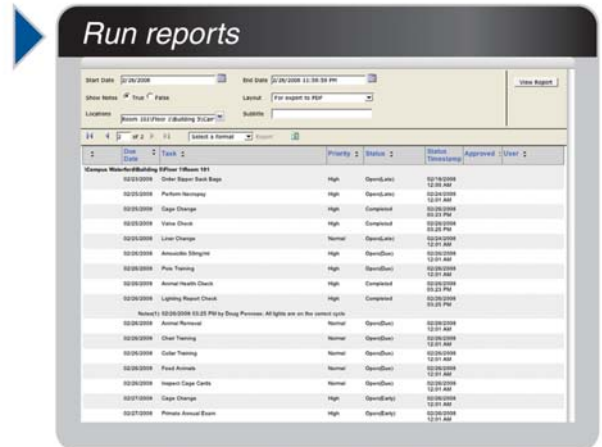

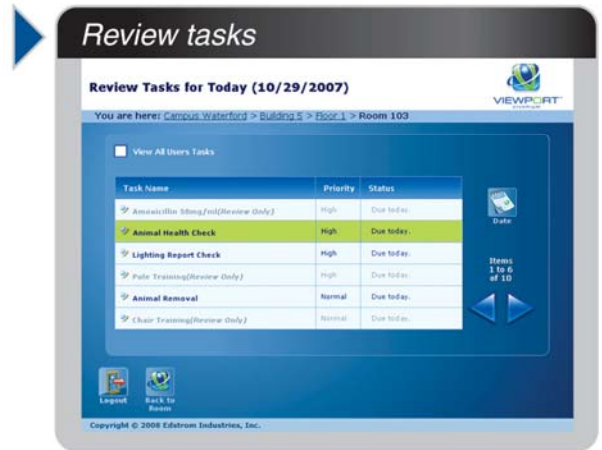

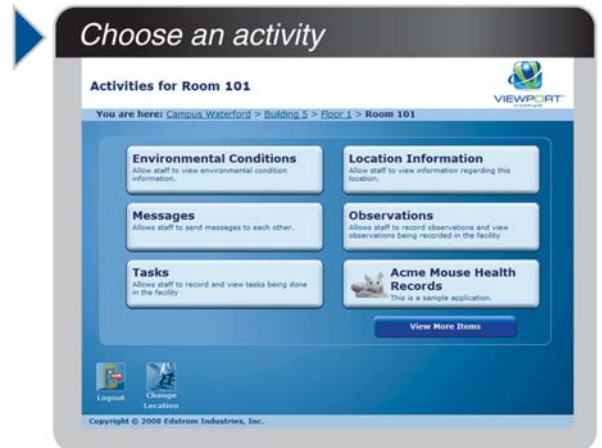

Reporting

Real-time feedback via your personal computer means no waiting to know the status of your facility. Feedback is provided in pre-configured reports on tasks, observations, and events.

ViewPort Vivarium meets 21CFR Part 11 compliance for electronic records.

Messaging and notification of critical conditions

- Overdue tasks can become alarms that are sent via email to notify supervisors and managers. When a critical observation is logged, an email notification is sent to the appropriate personnel. For instance, if an observation of a sick animal is entered, a Veterinarian is automatically notified.
- Electronic messaging allows people to compose, send and read messages at the touchscreens. Messages can be sent to individuals or groups of people.
- Broadcast messages are created by managers and contain general information for everyone in the facility to view at the touchscreens.

With ViewPort Vivarium, your facility will foster an environment of improved communication, better management with real-time information, and a consistent workflow with a reduction in paperwork. Your staff will know what they need to do, will spend less time on data entry, and everyone will have a heightened awareness of the status of the facility.

What can you perform at the ViewPort touchscreen?

- Log in with a User ID and Password. All actions at the touchscreens are audit trailed for accountability.
- View what tasks need to be performed in each room including tasks that are overdue and in alarm
- Complete tasks in a room or add a note
- View your SOPs to help maintain your processes
- Create an observation about animals, equipment, environment, or whatever you need tracked to a specific room
- View broadcast messages that are displayed on the touchscreen like a bulletin board
- View short videos (no audio), Microsoft PowerPoint presentations, Excel spreadsheets, and Word documents
- Read your messages or send a message to an individual or group of people
- See environmental conditions from Watchdog V5.20
- Gain access to other Web-based software through Partner Link

What can you perform from your personal computer?

- Run Task, Observation, and Event reports in just a few clicks; then view on the screen, export as a PDF document for signature, or to an Excel spreadsheet for analysis or processing
- Post Broadcast Messages
- Define different roles and assign staff to those roles
- Create task schedules
- Generate preconfigured Observation lists
- Produce predefined notes
- Create Partner Links
- Administer the system
- View and perform all activities that can be performed at the touchscreen

We welcome the opportunity to talk with you about your facility needs and provide additional information about how ViewPort Vivarium can simplify your facility.
